Presenting the **FUTURE** of teeth whitening technology...

## dazzle<sup>™</sup> **NEW** Advanced Teeth Whitening System

### BENEFITS:

- Advanced photochemical mediators
- No sensitivity, no pain, and no discomfort
- Superb color lightening
- Repeatable, after appropriate period
- Fast activation: Saves time for dentists and patients
- No need to purchase specialized lamp equipment
- Create and improve patient loyalty

### ADVANCED TECHNOLOGY:

#### **Dazzle<sup>™</sup> Powder Mix (Photo Active Booster):**

An exclusive formulation that is designed to efficiently absorb light energy coming from various dental curing lights. The Photo Active Booster accelerates the peroxide's activation and shortens the time of bleaching process.

#### **Visual System:**

Thanks to Dazzle's visible activation control that is present in the Dazzle Whitening Gel, precise indication lets you know when exactly the whitening gel has achieved its full activation.

**INTENSE ORANGE** -----> TONES OF **WHITE**

#### **"Cold" Photochemical Activator:**

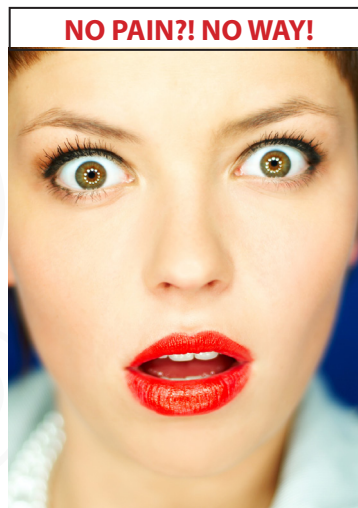

Since an increase in temperature can potentially harm the tooth and lead to tooth sensitivity, Dazzle's COLD type of photochemical activation ensures there is no significant tooth temperature increase, unlike many other whitening products.

**Product #:** 1010-100 (Single), 1010-000 (Bulk - 3 Singles)

#### **Contents:**
